50%+

Reduction in 24-hour cancellations

10%+

Increase in OR utilization

10%+

Reduction in denials and revenue leakage

5%+

Increase in surgical volumes

Driving Better Surgical Outcomes Through Intelligent Coordination

Integration

eORders open architecture ensures integration with any EHR using industry-standard interfaces such as HL7, X12, and FHIR or EHR-supported APIs.

AI

AI-powered multi-sensor technology, using computer vision and audio analytics, automatically identifies key intraoperative workflow events without video or audio recording.

Real-time insights power case coordination, improve communication, and reduce delays—ensuring the right patient, resources, and information are aligned at every step.

Eliminating the administrative burden on circulating nurses improves patient care and ensures data accuracy, laying a trustworthy foundation for benchmarking, scheduling optimization, and performance improvement.

Customization

Adaptable to your unique workflows, policies, and preferences. Configure rules, templates, and alerts to match your organization's processes—not the other way around.

Implementation & Training

A dedicated team ensures a smooth implementation with minimal disruption. Comprehensive training and ongoing support empower your team to succeed.
